

## ADVANCED RESEARCH PROJECTS AGENCY FOR HEALTH (ARPA-H)

President Biden proposed the creation of the Advanced Research Projects Agency for Health (ARPA-H) to improve the U.S. government's ability to speed biomedical and health research. Public Law 117-103 was enacted on March 15, 2022, authorizing the establishment of ARPA-H within the U.S. Department of Health and Human Services.

Recent advances in biomedical and health sciences—from immunotherapy to treat cancer, to the highly effective COVID-19 vaccines—demonstrate the strengths and successes of the U.S. biomedical enterprise. Such advances present an opportunity to revolutionize how to prevent, treat, and even cure a range of diseases including cancer, infectious diseases, Alzheimer's disease, and many others that together affect a significant number of Americans.

ARPA-H will support transformative high-risk, high-reward research to drive biomedical and health breakthroughs—ranging from molecular to societal—that would provide transformative solutions for all patients.

“The proposed mission of ARPA-H could be to make pivotal investments in break-through technologies and broadly applicable platforms, capabilities, resources, and solutions that have the potential to transform important areas of medicine and health for the benefit of all patients and that cannot readily be accomplished through traditional research or commercial activity.”
