What do you know about knowledge transfer?

Definitions

- **Knowledge:**

- facts, information, and skills acquired through experience or education; the theoretical or practical understanding of a subject.

- **Transfer:**

- an act of moving something or someone to another place, organization, team, etc.

Who are the players?

Community

Academicians/ staff

UCTC UPM

Community

- Choose the right community target
- Kluster
 - Komuniti Setempat, Komuniti Pertanian, Belia, Warga Emas, Pesakit Kanser, Orang Asli, Pendidikan Kanak-kanak/Pelajar
- Program
 - Sekolah Angkat, Program Warga Emas, Pembangunan Orang Asli, Bandar Hijau Serdang, etc
- Community must be sustainable
- Example: School teachers vs Students

Academics

- Backgrounds
 - Expertise
 - Team members
 - Experience
- What you want to transfer?
- Have you done it before?
- Are the methods/
formulations/ etc have been
proven effective?

Reasons to apply the grant

- Must have a need
 - From the community (to solve current issues)
 - From the academicians (to share the knowledge)
- Intention
 - Letter of intention as proof from the community
 - Not a letter from the academicians
 - Need to strategize - both ways

Examples of issues that need to be solved

- Conveying information/ technology to solve water problem
- Teaching to produce products from underutilize plants
- Transferring knowledge to community to eat healthy food
- Training teachers/ staff the more efficient learning methods

Academicians/ staff

Teachers/ staff of organizations/
committee of a community
(permanent)

Students (must include teachers)/ part-
time worker/ non-resident community
(non-permanent)

Title – the first mistake!

- Need to be straightforward
- Clear (easy to be understood by the evaluator)
- Include element of knowledge transfer
- Eliminate element of research
- Example:
 - “Knowledge Transfer of Home-Grown Vegetables Technology to Housewives of Sri Serdang Community”

Objectives – must be accurate

- Applicants know what they want to do
- Reflects the content of the proposal
- Include element of knowledge transfer (Again!)
- Eliminate element of research (Again!)
- Examples:
 - To teach the Orang Asli community to read the food labelling of the processed food products.
 - To train the teachers, canteen owners and students on choosing the healthier food for consumption.

Contents

- Highlight the knowledge transfer element
- Must be achievable
- Well planned and structured
- Tasks are divided properly between academicians and among the community
- Durations – within 12 months
- Need to be realistic - prepare a proper Gantt chart

Budget

- Within the given range (not too low).
 - Materials (not for research)
 - Transportation
 - Rent
 - **No payment for the academicians!** (you are transferring knowledge)
 - Not for buying equipment
- Money from the community
- In-kind from the community
 - Foods
 - Places (hall, classrooms, etc)

Output

- A measurable output (towards the community – **not the academicians!**)
- Examples:
 - Improve knowledge on selecting safe food to be eaten
 - Increase health status among kids due to the advice given
 - Change of attitude towards smoking among teenagers
 - Reducing cost of living due to consuming home-grown vegetables
 - Improve percentage of students passing the exams
 - Increase in sales of a food products

Can I include Research Element?

- 30% research element
- Need to be subtle
- Too much influence of research due to academicians background
 - Objectives – research driven
 - Spending/ budget – equipment, chemicals
 - Output – papers
- Too many mistakes done by previous applicants

Sharing my experience
